## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statements filed September 29, 2006 has/have been received and complies with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609. Accordingly, the information disclosure statement(s) is/are being considered by the examiner, and an initial copied is attached herewith.

### ***Foreign Priority Documents***

The Japanese foreign priority document(s) 2004-104624 , filed September 29, 2006 and submitted under 35 U.S.C. § 119 (a)-(d), has/have been received and placed of record in the file.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to

which it pertains, or with which it is most nearly connected, to make and/or use the invention. In claim 10, Applicant claims that the opening/closing member is configured to cover the electrode by changing its shape to close the oxidizing agent supply path. The specification does not appear to support a member that performs said function. On page 10 of the instant specification, the balloon functions as an opening/closing member and changes shape to block the oxidizing passage. However, it does not appear to cover the electrode in response to inflating to block the oxidizing path. Therefore, the specification does not appear enable the member to cover the electrode by changing its shape to close the supply path. An appropriate correction is required.
